- I certify that the information provided in this application is complete and accurate and consistent with any proposal(s) submitted to external funding agencies.
- I agree that I will not begin this project until receipt of official approval from the appropriate committee(s).
- I agree that modifications to the originally approved project will not take place without prior review and approval by the appropriate committee(s), and that all activities will be performed in accordance with all applicable federal, state, local and University of Georgia policies.
- I will follow applicable biosafety level requirements, comply with all shipping requirements and required waste management practices.
- I will ensure that all personnel have appropriate training including but not limited to: biosafety principles and techniques, accidental spills, shipping regulations, proper handling of biohazardous materials and waste management.
- I will complete the training on Dual Use Research of Concern and Pathogens with Enhanced Pandemic Potential.
- I am aware that the IBC reserves the right to conduct inspections of the research facilities at any time.

Completion of this section is a requirement for all protocols submitted to the UGA IBC. Failure to complete this section will result in the protocol not being submitted for IBC review.

Refer to the <u>United States Government Policy for Oversight of Dual Use Research of Concern and Pathogens with Enhanced Pandemic Potential for definitions of Category 1 and Category 2 research.</u>

1.	Work in my laboratory involves or could result in a pandemic potential pathogen (PPP) or a pathogen with enhanced pandemic potential (PEPP). If yes, please list the pathogen names and identify experimental outcome(s) or action(s).	Yes	No
	Pathogen name(s):		
	This work is reasonably anticipated to result, or does result in, one of the following Cate experimental outcomes or actions:	egory 2	
	Enhanced transmissibility of the pathogen in humans.	Yes	No
	Enhanced virulence of the pathogen in humans.	Yes	No
	Enhanced immune evasion of the pathogen in humans (such as by modifying the pathogen to disrupt the effectiveness of pre-existing immunity via immunization or natural infection.  Generation, use, reconstitution, or transfer of an eradicated or extinct PPP, or a	Yes	No
	previously identified PEPP.	Yes	No
2.	Work in my laboratory involves an agent or toxin within the scope of Category 1 research. If yes, please list the pathogen name(s), indicate whether the work is anticipated to result in, or does result in, one or more of the experimental outcome(s) or action(s) specified for Category 1 research.	Yes	No
	Pathogen name(s):		
	Work in my laboratory is reasonably anticipated to result in, or does result in, one or more of the experimental outcomes or actions specified for Category 1 Research. If yes, please specify the experimental outcome(s) or action(s) below.	Yes	No
	Experimental outcome(s) or action(s):		
F	or any "Yes" answers to prompts in questions 1 and 2, please fill out the DURC/PEPP Rese and the Risk/Benefit Assessment and Risk Mitigation Plan Forms, found on the <u>UGA IBC</u>		
3.	I have reviewed and understand the information provided in the information sheet on the Oversight of Dual Use Research of Concern and Pathogens with Enhanced Pandemic Potential Policy.	Yes	No
4.	I understand that it is my responsibility to continuously assess my research for Category 1 and Category 2 research throughout the research lifecycle.	Yes	No
Туре	of Funding Source(s) for this Project:		
•	Department/institutional funds Business/industry		
	Foundation Other Federal funds		
	If project is supported with federal funds, name of funding agency and grant or contract	number:	

**Key Personnel.** List all project personnel and relevant experience. This information is intended to inform the committee of the training and background of the investigators and key personnel. The PI and Co-PI name will automatically populate in the first and second boxes – if there is no Co-PI, please be certain that the second name listed is "N/A". For additional personnel, please list one name per row.

Name	Degree	Specific Duties on Project	Number of Years Training and Description of Experience

Non-Technical Synopsis. Please give a brief description of your project easily understood by nonscientists. Explain the overall goal, anticipated outcomes, and potential benefits. Do not use abbreviations and technocabulary or phrases.

24. Please check beside any BSL-1, BSL-2, or BSL-3 standard procedures you will use for decontamination of biohazardous waste, contaminated equipment, and surfaces.

### **BSL-1** and **BSL-2** standard procedures:

**Autoclaving of solid waste**: Solid waste is collected in double-biohazard bags placed or a single biohazard bag at least 3 mil thick within a solid-walled, leakproof container. When ~¾ full, the bag is closed for transportation to the autoclave and is labeled with PI name and/or lab room number and a chemical test indicator. The bag is opened in the autoclave room to ensure there is an opening at least 2-3" in diameter and the waste is autoclaved for at least 30 minutes at 121°C. When the run is complete, the chemical test indicator is taped into an established autoclave logbook and the results are recorded. If the chemical test indicator passed, the waste is disposed of in black bags which are tightly tied and brought to the dumpster. Autoclave logs are kept for a minimum of 3 years.

**Chemical decontamination of reusable labware:** All liquid or solid waste is removed from the labware and decontaminated appropriately. The labware is then decontaminated by completely submerging it in 10% bleach (prepared fresh daily from at least 5.25% sodium hypochlorite) for at least 20 minutes prior to washing.

**Surface/contaminated equipment decontamination:** Surfaces are sprayed down with 70% ethanol and allowed to sit for a contact time of at least 2-3 minutes. A disposable paper towel will be used to wipe the surface down, after which the paper towel will be placed directly into the biohazard bin.

**Liquid waste decontamination:** Liquid waste is treated by adding bleach (at least 5.25% sodium hypochlorite) to the waste to reach a final concentration of 10% and allowing for a contact time of at least 20 minutes prior to disposal down the drain. All bleach solutions are prepared fresh daily.

#### **BSL-3** standard procedures:

**Autoclaving of solid waste:** Solid waste is collected in double-biohazard bags placed or a single biohazard bag at least 3 mil thick within a solid-walled, leakproof container. When ~¾ full, the bag is closed tightly for transportation to the autoclave and is labeled with PI name and/or lab room number and a chemical test indicator. The bag is opened in the autoclave room to ensure there is an opening at least 2-3" in diameter and the waste is autoclaved for at least 90 minutes at 121°C. When the run is complete, the chemical test indicator is taped into an established autoclave logbook and the results are recorded. If the chemical test indicator passed, the waste is disposed of in black bags which are tightly tied and brought to the dumpster. Autoclave logs are kept for a minimum of 3 years.

25.	If using modified standard procedures, please outline the modifications that your lab will use.
26.	If working with plants, please outline the decontamination procedures your lab will use.

31. For each individual listed on this protocol, please indicate the date the following training was completed. If the training is not applicable, please enter "N/A". Proficiency documentation is required for individuals (other than the PI and Co-PI) working in any microbiological lab. In addition, bloodborne pathogen training (UGA Right to Know: Bloodborne Pathogens Training available on PEP) is required for all individuals working with human-derived materials or non-human primate-derived materials. Personnel names will automatically populate to reflect the key personnel table.

Name	Proficiency do subm	ocumentation itted?	Date of Bloodborne Pathogen Training (if required)
