Lab Animal

URAR Mouse Comprehensive

Reported By

Sarah Bates, Lab Technician III

Comments

This Clostridium piliforme ELISA has been shown to result in a small number of false positive reactions, possibly due to non-specific antibodies to other anaerobic Gram positive organisms. The preferred method of detection is by fecal PCR. We strongly recommend a follow-up PCR on all ELISA positive animals.

Comments

I- Inconclusive, the inconclusive ELISA results should be interpreted as non-specific fluorescence because they cannot be confirmed by another serological assay. The inconclusive specimens tested negative by MFIA at an outside laboratory.
